

Affan Arif Khamse

Brooklyn, NY · (516) 853-4972 · khamseaffan@gmail.com · github.com/khamseaffan · linkedin.com/in/affan-khamse

Education

Master of Science in Computer Science (GPA: 3.78/4)

New York University

Courses: Software Engineering, Data Structures & Algorithms, Machine Learning, Databases

New York, NY, USA

Expected May 2025

Bachelor of Engineering in Computer Engineering (GPA: 9.00/10)

University of Mumbai

Mumbai, India

June 2023

Technical Skills

Programming Languages: C++, Java, Python, C#, HTML, CSS, JavaScript, SQL

Frameworks and Libraries: Flask, Spring(Java), Django, ReactJS, REST API

Cloud and DevOps: Amazon Web Services / AWS, Microsoft Azure, Docker, Kubernetes, CI/CD Pipelines

Databases: MySQL, PostgreSQL, MongoDB, Firebase, NoSQL, Hibernate ORM

Testing & QA: JUnit, PyTest, Django Test, Chrome DevTools

Tools and Methodologies: Git, GitHub, Travis CI, Figma, Agile (Scrum), UML, Object-Oriented Design

Specialized Expertise: Microservices, Scalable Back-End Development, API Integration, Real-Time Systems Design

Work Experience

Software Teaching Assistant – Object-Oriented Programming

Courant Institute of Mathematical Sciences @ New York University

New York, NY, USA

January 2024 – Present

- Mentored 50+ students in Object-Oriented Programming (C++ and Java), applying software engineering principles to real-world scenarios and debugging complex issues
- Conducted code reviews and provided constructive feedback on programming assignments, enhancing code quality, maintainability, and adherence to best practices

Projects

Inquis AI - Software Engineer

Flask, Python, Bootstrap, AWS, Firebase, Azure DevOps, RESTful APIs

June 2024 - Present

GitHub upon request

- Spearheaded the development of an AI platform enabling non-technical users to create tailored virtual assistants by uploading data, powered by large language models for domain-specific interactions
- Designed and implemented a robust front-end using HTML, CSS, and JavaScript, supported by Flask for server-side logic and Firebase for real-time data, with error-handling mechanisms that **enhanced system reliability by 30%**
- Architected and deployed high-performance, scalable RESTful APIs, optimizing data operations (retrieval, insertion, deletion) to enhance efficiency and scalability, supporting **1,000+ concurrent users**
- Reduced project delivery timelines by 25% through effective **Agile sprint** management using **Azure DevOps**

Live Flash Auctioning System

AWS EC2, DynamoDB, S3, Redis, WebSockets, CloudWatch, Flask, Python, REST APIs, DevOps

September 2024 - December 2024

[Demo GitHub](#)

- Architected and developed the platform as a Full Stack Engineer, integrating AWS EC2 with Auto Scaling, DynamoDB, and S3 to ensure low-latency bidding and scalable performance, **handling peak user loads of 1,000+ sessions**
- Executed the design and deployment of REST APIs, optimizing operations like auction creation and bidding for a **30% reduction in response time**
- Collaborated with front-end and back-end teams to integrate WebSocket-based real-time communication, **reducing latency by 40%** and improving system reliability
- Built a robust **bidding pipeline** using **Amazon SQS** and **SES**, processing 1,000+ bids per minute with 99.9% accuracy and improving user engagement through personalized notifications
- Improved team efficiency by employing **DevOps practices** to streamline the development process, reducing deployment time by 20-25% with better planning and collaboration

Roomio – Apartment Rental and Roommate Finder Web Application

Django, PostgreSQL, HTML, CSS, JavaScript, Bootstrap

February 2024 - March 2024

[GitHub](#)

- Engineered an optimized **Entity-Relation (ER)** model and relational database schema, enabling efficient data queries and storage solutions
- Delivered full-stack features with Django, facilitating seamless communication between front-end and back-end for secure and scalable architecture

VibeCheck (Full-Stack Project)

Django, Python, Bootstrap, AWS Elastic Beanstalk, PostgreSQL, Redis, TravisCI

September 2023 - December 2023

[Demo GitHub](#)

- Managed the development of a music-based social networking app, ensuring scalable real-time interactions and reduced latency by 30-40% through **Redis Channels**
- Implemented a robust **CI/CD pipeline** and launched the app on AWS, leveraging Travis CI for **automated testing** and seamless integration workflows
- Ensured reliability through comprehensive unit testing with Django.test, **achieving 87% coverage**, improving application quality and maintainability
